RoHS Statement

Kaufman and Robinson, Inc. (KRI) is a manufacturer of ion sources and ion-source controllers made specifically to power and control plasma processes. All KRI® equipment is designed for large, stationary systems. KRI management has evaluated our equipment per the requirements of the RoHS 2 directive 2011/65/EU and believe our equipment is outside the scope of this directive. Article 2, section 4 lists the equipment to which this directive does not apply:

(c, d, e) – equipment to be installed as part of large stationary tools or large-scale fixed installations

(j) – equipment specifically designed for research and development purposes

After close examination of the RoHS 2011/65/EU Directive, KRI management has determined that this directive does not apply to any equipment manufactured by or marketed by KRI.

Although we are currently outside the scope of this directive, KRI has been designing products to meet RoHS directives for many years. We are working toward implementing processes and tools to meet reporting requirements per the RoHS directives in case market requirements change. KRI continues to monitor customer needs and compliance directives to ensure delivery of products to our customers.
